

YJFC Custom Content Pack for ForeFlight

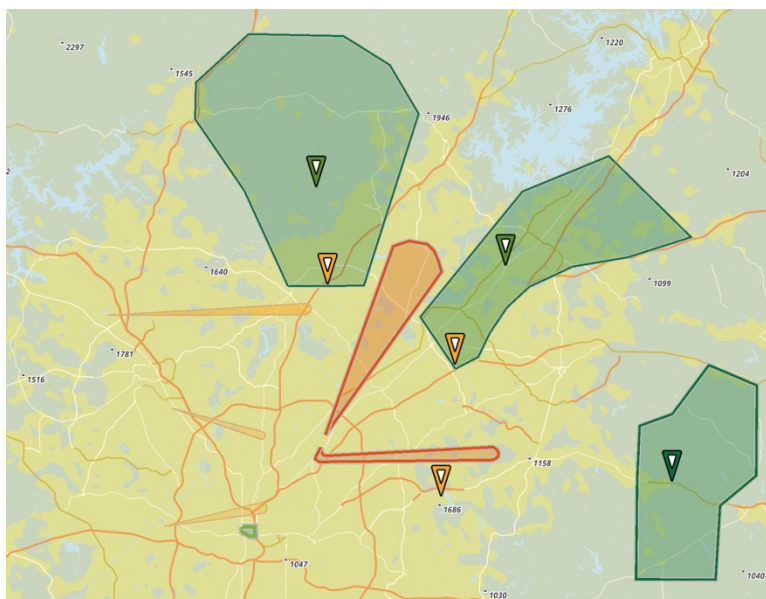

Foreflight “Pro” plans allow you to install and use custom content packs. These packs contain map overlays, additional documents, and points of interest that can be added to the map for use in-flight.

The YJFC Custom Content Pack contains 3 elements:

- Map overlays that show:
 - 3 designed practice areas
 - IFR arrival corridors at PDK (please avoid)
 - IFR arrival corridors at nearby airports (informational)
- Radio Scripts on the Airport Information Screen
- Communications frequency quick reference sheets for the practice areas

Map Overlay

Area	Color	Description
Practice Areas	Green	North, Northeast, East practice areas
IFR Approach Corridors	Red	Avoid these areas due to numerous inbound arrivals
Final Approaches to Nearby Airports	Orange	Arriving traffic to nearby airports

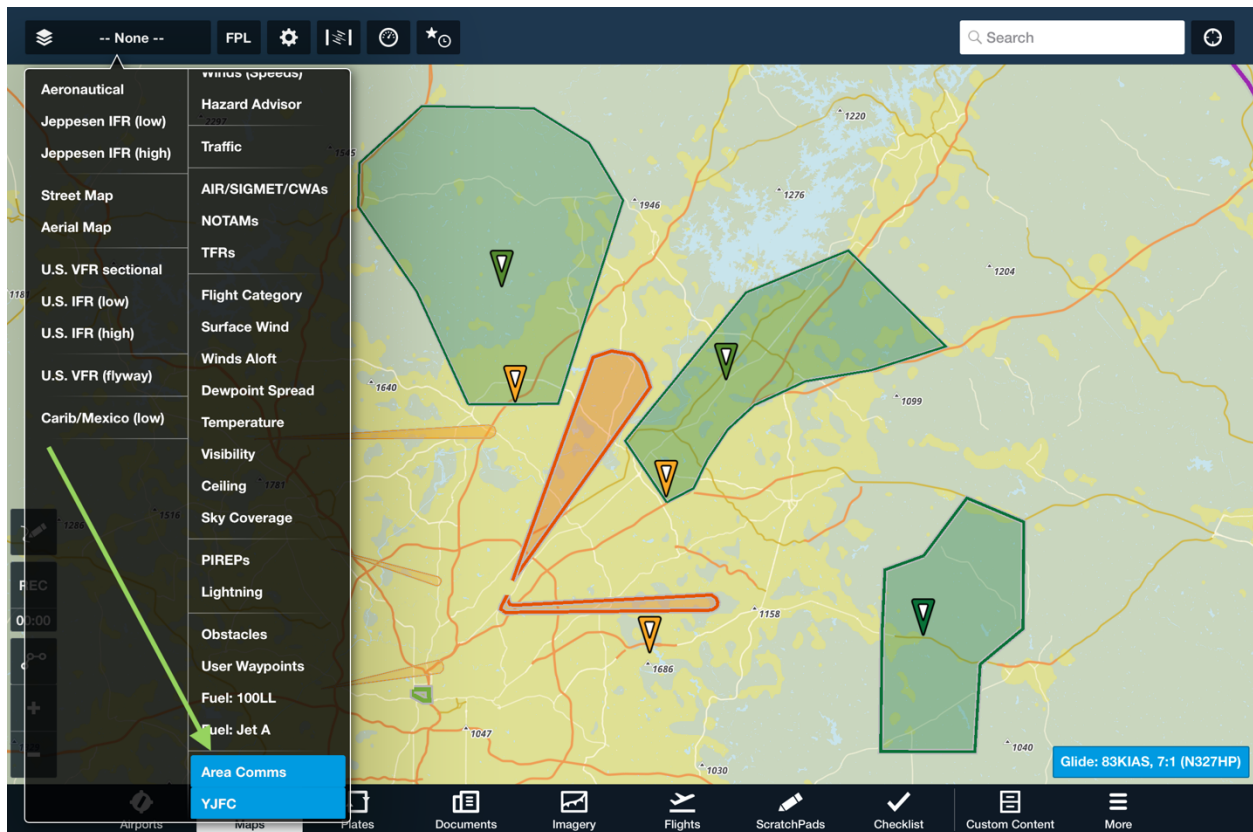

Enabling and Disabling the Map Overlay

Once the content pack is installed, you can enable and disable map elements directly from the Map screen in ForeFlight.

The “YJFC” map displays the custom overlays of practice areas and airspace to avoid.

The “Area Comms” enables and disables the communications “waypoints,” which bring up additional features and reporting points suggested when returning to PDK.

Radio Scripts

You can add radio scripts created by past YJFC flight instructors onto the PDK information page in ForeFlight. This links to a PDF document that assists you in the step-by-step radio calls at PDK to get from the Clairemont Ramp to the departure runways, and in and out of the traffic pattern at PDK.

Navigation Data / Custom Points of Interest

The custom points of interest on the map, toggled by selecting “Area Comms” in the Map view, turn on additional data elements that can be referenced while in flight. This includes communications sheets that list key radio frequencies to monitor for traffic in the area, as well as for airports in the vicinity of the practice areas. Tapping on the *green* marker will bring up a menu, that lets you pull up a radio frequency reference, like the one below.

Installing the Custom Content Pack

From your iPhone or iPad with ForeFlight installed, click on the following link to download and install the custom content pack. You want to select ForeFlight from the "Open in..." window that appears on your device.

You can view all your installed custom content pack from the menu within ForeFlight, which is also where you can go to delete this (or any other) custom content pack.

The download link is:
